Overall Morningstar Ranking (Class I)

★★★

EXOSX received a 3-Star Overall Rating out of 383 Foreign Large Growth funds, based on risk adjusted returns derived from a weighted average of the Fund's 3-, 5- and 10-year Morningstar metrics.

See next page for additional details

Investment Objective

To maximize long-term growth by investing principally in the common stocks of companies located around the world.

Investment Strategy

The Series may invest in stocks of companies both in developed countries and in emerging market countries. The maximum allocation to any one country, measured at the time of purchase, is the higher of 15% or double the country's weighting in the MSCI (EAFE) Index. Total holdings in emerging market countries are limited to 35% of the portfolio measured at the time of purchase.

Portfolio Managers

Performance data quoted represents past performance and does not guarantee future results.

Performance for periods greater than one year is annualized. The investment return and principal value of an investment will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than that quoted; investors can obtain the most recent month-end performance at www.manning-napier.com or by calling (800) 466-3863.

Inception performance is based on the Overseas Series Class I inception of 09/23/1998. For periods through 09/21/2018 (the inception date of the Class S shares), performance for the Class S shares is hypothetical and is based on the historical performance of the Class I shares adjusted for the Class S shares' charges and expenses. Returns shown include a one-time payment unrelated to the Fund's current portfolio investments received by the Fund during the third quarter 2020. The payment added approximately 3.6% to the Fund's performance in calendar year 2020. The portion of the Fund's average annual return attributable to the proceeds will vary by time frame.

Equity Sector Allocation

What You Should Know About Investing

All investments involve risks, including possible loss of principal. Funds whose investments are concentrated in foreign countries may be subject to fluctuating currency values, different accounting standards, and economic and political instability. The value of the Series may be affected by changes in exchange rates between foreign currencies and the U.S. dollar. Investments in emerging markets may be more volatile than investments in more developed markets.

Fund Commentary

Global equity markets faced increased volatility early in the quarter but ultimately pushed higher. Mega-capitalization U.S. growth stocks led the way once again this quarter when it comes to what's driving global markets, as both the growth style overall and U.S. stocks in general outperformed value and foreign market stocks respectively. Interestingly, emerging markets outperformed developed markets outside the U.S., led largely by outsized quarterly returns in India and Taiwan.

The strategy posted positive absolute returns for the quarter and outperformed on a relative basis. Outperformance was generated to an even degree by geographic positioning, sector exposures, and individual stock selection. From a country perspective, a meaningful underweight to Japan, which experienced a reversal to the negative this quarter, as well as an overweight to the UK had a positive impact. In terms of sector exposures, an overweight to Information Technology companies was a notable positive. Taiwan Semiconductor was the most impactful individual company overweight having a positive impact, followed closely by our position in AstraZeneca. Contrarily, positions in IMCD and Airbus had notably negative impacts on performance.

In our view, markets continue to look broadly expensive, and in many areas "priced for perfection." However, markets outside the U.S. appear to potentially be earlier cycle than the domestic economy, and the global dominance of mega-capitalization U.S. tech companies has resulted in valuations appearing rather attractive in foreign markets. We have observed and taken advantage of a wider variety of opportunities between both high-quality long-term positions and more economically sensitive exposures.

In terms of specific portfolio changes during the quarter, we added Infineon to our semiconductor manufacturing exposure as well as a new position in West Fraser, the world's largest lumber company. Infineon is a chipmaker with a focus on chips that enable energy efficiency as well as those that are embedded in basic computing systems and sensors. The company cycle has rolled over to the negative with downward earnings estimate revisions, which has resulted in a very attractive entry point for us to take a position in a great company. It is also a cyclical opportunity in the lumber market that attracted us to West Fraser, as lumber demand has been weak because of an effectively frozen housing market. We expect the market to thaw as interest rates begin to decline, which will set up well for a recovery in lumber, especially best-in-class West Fraser.

To the contrary, examples of names removed from the portfolio during the quarter included Health Care companies Novartis and Medtronic. These were the result of a total portfolio review to ensure that the portfolio continued to reflect our highest conviction ideas. For example, we sold out of Medtronic as we believe it will be difficult for the stock's multiple to meaningfully rerate, resulting in a range-bound situation with limited risk/reward upside. Therefore, we decided it's better to sell out now in lieu of better ideas.

Definitions

Alpha: A measure of an investment's performance relative to a benchmark index. It represents the excess return of an investment compared to the return of the benchmark.

Beta: A measure of an investment's volatility relative to the overall market.

Standard Deviation: A statistical measure of the dispersion of returns for a given investment. It quantifies the amount of variation or volatility from the average return.

Sharpe Ratio: A measure of risk-adjusted return, calculated by subtracting the risk-free rate from the investment's return and then dividing by its standard deviation.

Market Capture: Up market capture is the % of market return captured by the investment manager's return relative to the benchmark during positive periods while down market capture is the % of market return captured by the investment manager's return relative to the benchmark during negative periods.

For more information about any of the Manning & Napier Fund, Inc. Series, you may obtain a prospectus at www.manning-napier.com or by calling (800) 466-3863. Before investing, carefully consider the objectives, risks, charges and expenses of the investment and read the prospectus carefully as it contains this and other information about the investment company.

Manning & Napier Fund, Inc. Overseas Series I was rated against Foreign Large Growth funds and had a 3 star rating for the three year, a 4 star rating for the five year, a 2 star rating for the ten year, and a 3 star rating overall, as of 06/30/2024, out of 383, 331, 221, and 383 funds respectively. Ratings for other share classes may differ. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and ten-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Morningstar, Inc. is a global investment research firm providing data, information, and analysis of stocks and mutual funds. ©2024 Morningstar, Inc. All rights reserved. Prior to 07/10/2002, all performance figures reflect the performance of the Exeter Trust Company Group Trust for Employee Benefit Plans: International Collective Investment Trust (the Collective), which was managed by Manning & Napier Advisors, Inc. (predecessor to Manning & Napier Advisors, LLC), an affiliate of the distributor, and reorganized into the Manning & Napier Fund, Inc. Overseas Series on 07/10/2002. The Collective was not open to the public generally or registered under the Investment Company Act of 1940 and the fees of the Collective were lower than the Series' fees. Therefore, the historical performance of the Collective would have been lower if the Collective had been subject to the same fees as the Series. Returns shown include a one-time payment unrelated to the Fund's current portfolio investments received by the Fund during the third quarter 2020. The payment added approximately 3.6% to the Fund's performance in calendar year 2020. The portion of the Fund's average annual return attributable to the proceeds will vary by time frame. The MSCI ACWI ex USA Index (ACWIxUS) is designed to measure large and mid-cap representation across 22 of 23 Developed Markets countries (excluding the U.S.) and 24 Emerging Markets countries. The Index returns do not reflect any fees or expenses. The Index is denominated in U.S. dollars. Index returns assume daily investment of gross dividends (which do not account for applicable dividend taxation) prior to 12/31/1998, as net returns were not available. Subsequent to 12/31/1998, the Index returns are net of withholding taxes. They assume daily reinvestment of net dividends thus accounting for any applicable dividend taxation. Index returns provided by Bloomberg. Index data referenced herein is the property of MSCI, its affiliates ("MSCI") and/or its third party suppliers and has been licensed for use by Manning & Napier.
