

Manning & Napier Fund, Inc.

Unconstrained Bond Series

June 30, 2024

Overall Morningstar Ranking (Class I)

★★★

MNCPX received a 3-Star Overall Rating out of 278 nontraditional bond funds, based on risk adjusted returns derived from a weighted average of the Fund's 3-, 5- and 10-year Morningstar metrics.

See next page for additional details

Investment Objective

To provide long-term total return, with a secondary objective of providing preservation of capital.

Investment Strategy

The portfolio is built around actively managing risk and seeking higher return potential only when the risk/reward trade-off is favorable. Top-down guidelines and bottom-up security analysis are used to build a diversified portfolio of individual securities. Positioning is constructed based on the current environment, so exposures shift as conditions and perceived sources of value shift.

- No maturity or duration limits; expected duration: 0 to 5 years
- 50% - 100% investment-grade securities
- 0% - 50% high yield securities
- 0% - 50% non-U.S. dollar-denominated securities, including securities issued in emerging markets
- May use derivative instruments such as futures, options, swaps, and forwards to manage risk

BAB Index	0.06%	-0.71%	2.63%	-3.02%	-0.23%	1.35%	3.01%

Performance data quoted represents past performance and does not guarantee future results. Performance for periods greater than one year is annualized. The investment return and principal value of an investment will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than that quoted; investors can obtain the most recent month-end performance at www.manning-napier.com or by calling (800) 466-3863.

[†]Class I since inception performance is based on the Unconstrained Bond Series Class S inception of 04/21/2005. For periods through 08/01/2013 (the inception date of the Class I shares), performance for the Class I shares is based on the historical performance of the Class S shares. Because the Class I shares invest in the same portfolio of securities as the Class S shares, performance will be different only to the extent that the Class S shares have a higher expense ratio.

30-Day SEC Yield (as of 06/30/2024)

	Yield
Class I	5.39%

If fees had not been waived, the 30-day SEC Yield (as of 06/30/2024) would have been 5.39% for Class I.

Non-US Dollar	7.29%	--

What You Should Know About Investing

All investments involve risks, including possible loss of principal. Because the fund invests in both stocks and bonds, the value of your investment will fluctuate in response to stock market movements and changes in interest rates. Investing in the fund will also involve a number of other risks, including issuer-specific risk, foreign investment risk, and small-cap/mid-cap risk. Investments in options and futures, like all derivatives, can be highly volatile and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. Also, the use of leverage increases exposure to the market and may magnify potential losses.

Fund Commentary

Against a backdrop of a modestly slowing economy and moderating inflation, credit spreads ended the quarter roughly unchanged. Interest rates experienced some mild turbulence as rates rose on longer-dated securities, while shorter-term rates generally remained unchanged as the Federal Reserve made no changes to their target range. Taking a closer look at the Federal Reserve, despite the progress that has been made thus far on bringing down inflation, they noted that they are not considering any adjustments to the target range (5.25% - 5.50%) until they have greater confidence that inflation is moving towards their 2.00% target.

The Unconstrained Bond Series generated positive returns during the quarter and outperformed the broad fixed income market given the higher levels of income associated with the securities we own.

In terms of positioning, the Series has a duration of roughly three years as we believe we are being compensated to take some interest rate risk in the portfolio at current levels. From a sector perspective, the Series continues to have a notable allocation to credit (primarily securitized credit), with roughly 13% in high yield rated issues. Within high yield, we marginally adjusted the composition of our exposure as we found compelling, idiosyncratic opportunities in other areas of the market. During the quarter, we also modestly reduced our allocation to U.S. treasuries and added to select securities within the securitized sector (e.g., data center asset-backed securities and private student loans). Finally, we exited our short Japanese yen position as it reached our stop price, initiated a 5s30s steepener in German bunds (which would benefit from an increase in the differential between five- and ten-year bunds), and decreased our 2s10s steepener in U.S. treasuries as the differential between the two has narrowed.

In our view, an economic "soft-landing" scenario has become increasingly possible as the probability of an imminent economic downturn has declined over the past several months. However, we continue to believe that the U.S. economy remains in a late-cycle environment.

We see reasons that inflation could remain elevated longer-term (e.g., putting a floor under yields), giving us caution in the short to intermediate-term. With respect to credit markets, particularly corporate markets, we believe that we will likely begin to see a more normal credit cycle play out as spreads are at/near their historical lows. As we look to navigate this difficult environment, we believe that a select, disciplined approach focused on current valuations and economic conditions will be key to avoiding areas of risk and uncovering opportunities.

Definitions

Alpha: A measure of an investment's performance relative to a benchmark index. It represents the excess return of an investment compared to the return of the benchmark.

Beta: A measure of an investment's volatility relative to the overall market.

Standard Deviation: A statistical measure of the dispersion of returns for a given investment. It quantifies the amount of variation or volatility from the average return.

Sharpe Ratio: A measure of risk-adjusted return, calculated by subtracting the risk-free rate from the investment's return and then dividing by its standard deviation.

Duration: A measure of the sensitivity of a fixed income security's price to changes in interest rates. It indicates the expected life of the security and how much its price will change with a 1% change in interest rates. Securities with shorter durations are generally less affected by interest rate changes than those with longer durations.

For more information about any of the Manning & Napier Fund, Inc. Series, you may obtain a prospectus at www.manning-napier.com or by calling (800) 466-3863. Before investing, carefully consider the objectives, risks, charges and expenses of the investment and read the prospectus carefully as it contains this and other information about the investment company.

The data presented in the commentary is for informational purposes only. It is not to be considered a specific recommendation. Analysis: Manning & Napier. Portfolio Composition data for the Series (excluding SEC yield) provided by FactSet. Industry Breakdown is provided by FactSet. Cash allocation may vary slightly given the different sources of data. Analysis: Manning & Napier. Investments will change over time. While not reflected within Sector Allocation, the Series does maintain exposure to derivatives, specifically interest rate futures. The "Other" category contains securities such as ETFs and others that cannot otherwise be classified.

Manning & Napier Fund, Inc. Unconstrained Bond Series I was rated against Nontraditional Bond funds and had a 3 star rating for the three year, a 3 star rating for the five year, a 3 star rating for the ten year, and a 3 star rating overall, as of 06/30/2024, out of 278, 249, 176, and 278 funds respectively. Ratings for other share classes may differ. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and ten-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Morningstar, Inc. is a global investment research firm providing data, information, and analysis of stocks and mutual funds. ©2024 Morningstar, Inc. All rights reserved.
